CONTENTS

Anna Demianiuk, Sławomir Adam Sorko
Analysis of Flow and Thermal Phenomena In Evacuated Tube Collectors ................................................................. 5

Krzysztof Dziewiecki, Zenon Mazur, Wojciech Blajer
Assessment of Muscle Forces and Joint Reaction in Lower Limbs During the Take-Off from the Springboard ................. 11

Tadeusz Kaczorek
Factorization of Nonnegative Matrices by the Use of Elementary Operation .............................................................. 15

Dmitrij B. Karev, Vladimir G. Barsukov
Biomechanical Analysis of Two-Point Asymmetric Screw Fixation with Implant for Femoral Neck Fracture ............... 19

Witold Kosiński, Wiera Oliferuk
Stationary Action Principle for Vehicle System with Damping .................................................................................. 23

Adam Kotowski
Frequency Analysis with Cross-Correlation Envelope Approach .................................................................................. 27

Zbigniew Kulesza
Rotor Crack Detection Approach Using Controlled Shaft Deflection ........................................................................... 32

Tomasz Nartowicz
Design of Fractional Order Controller Satisfying Given Gain and Phase Margin for a Class of Unstable Plant with Delay .... 41

Tomasz Nartowicz
Analytical Method of PID Controller Tuning for a Class of Unstable Plant .................................................................. 46

Ewa Pawłuszewicz
Null-Controllability of Linear Systems on Time Scales .................................................................................................. 50

Norbert Sczygiol
A New Stress Criterion for Hot-Tearing Evaluation in Solidifying Casting ................................................................. 56

Wiesław Szymczyk
Numerical Analysis of Residual Stress in a Gradient Surface Coating ........................................................................... 63

Anna Justyna Werner-Juszczyk, Sławomir Adam Sorko
Application of Boundary Element Method to Solution of Transient Heat Conduction ................................................ 67
